- 1. Since about March 1948, the remaining part of the Siebel-Flugzeugwerke in Schkeuditz has been engaged, among other things, in the production of instructional jet engine models.
- 2. These model jet engines are made of dural castings and are of sectional design, so that the mechanism can be demonstrated. The engines, which are about 1.50 meters in length, are driven by electric motors.
- 3. Small component parts for the engines are made by the "DUZ-Mechanik" Werke in Halle-Nietleben.
- 4. Stands or bases for these engines are made at the Stanzwerk "Zwintschona" (sic), which had a contract to complete 500 by 1 December 1948. These 500 stands were completed and delivered to Siebel by 25 November 1948, and a contract was given for sixty more to be completed by 1 December 1948.
